The Verbindend greatly clarifies and emphasises the signals through the rein. Promoting self carriage and throughness, a true outline and freedom through the shoulder can be developed with this bit. The Verbindend has consistently helped eradicate tongue evasions, encouraging the horse to soften and relax through the jaw. The cleverly curved mouthpiece can also enhance the development of the bend for lateral work and smaller circles.

Super lightweight Hunter Dee, incorporating the modern hinged American Dee-Lite Cheek. Increased directional control recommended for the showjumper requiring tight turns and of benefit for dressage where accuracy and clear shoulder aids are essential. Proves a very popular choice for horses that are heavy on the forehand as lift in front and shoulder freedom is usually achieved.
