The Verbindend greatly clarifies and emphasises the signals through the rein. Promoting self-carriage and throughness, a true outline and freedom through the shoulder can be developed with this bit. The Verbindend has consistently helped eradicate tongue evasions, encouraging the horse to soften and relax through the jaw. The cleverly curved mouthpiece can also enhance the development of the bend for lateral work and smaller circles.

The Eggbutt cheekpiece supports and stabilises the mouthpiece. It is highly recommended for horses that intermittently 'drop' the contact. Also proves beneficial for horses with sensitive lips prone to rubbing.

Popular for dressage where extra lift is needed and also in the show ring both in hand and under saddle.
