

YOUR GUIDE TO TRANSFORMING YOUR RIDING

Join the Bitting Revolution™

N eu
SD chule

Here at Neue Schule we are passionate horse owners. We understand what it is to get up a 5 o'clock in the morning, in the pitch black on a cold and dreary winter's day to muck out, exercise and turn out our beloved horses! Our horses are all fed and watered before we are. Horse ownership is a major commitment, demanding much of our time. However, as riders ourselves we know that the rewards are immeasurable. From serious competitors to pleasure riders and even those with retirees, Neue Schule understands you. We are all dedicated to our four-hoofed friends, come rain or shine.

Neue Schule has a core belief in "That which is good for the horse is all that matters, the rest will follow" (*after P.R. van Weeren*). We truly believe that the horse comes first and as a Company we uphold this. You may rest assured that your Neue Schule bit has been designed to promote the harmonious partnership between the horse and rider.

Heather Hyde (*Neue Schule Founder & Director*) with mare and foal

Neue Schule is dedicated to engineering the world's best bits. Our company stands apart from others in that we create our products combining scientific research and practical rider experience, creating bits that are focused on improving horse performance, comfort and welfare. We aim to enhance the communication and partnership between the horse and rider. Each bit has been anatomically designed from the inside out. Our vast collection caters for not only the variance in mouth conformation, but also ensures that we connect with the desired areas in order to ensure comfort, sustainability and achieve the desired way of going. Your objective may be to eradicate a long-term tongue evasion due to discomfort, or to promote a specific response through the rein aid. Whatever you need, Neue Schule will have a bit for you. Neue Schule will have a bit for you. With all our extensive research to hand we can advise on issues accordingly to achieve an optimal partnership between horse and rider.

ABOUT NEUE SCHULE

Outreach and Education

Whether we are out and about delivering biting advice or informative talks, Neue Schule has been entrusted by you to give the true picture. Our NS Academy team conduct research that is published in the scientific literature and which leads our product design approach. Team members are regularly invited to universities and colleges to educate the equine leaders of tomorrow. Ask yourself - "Do I really know how my bit works?" Neue Schule and its educational offshoot, The Academy, can tell you.

When it comes to choosing your bit, the team at Neue Schule is committed to providing accessible, friendly and professional advice. This ensures that you have the ideal bit for you and your horse. Each horse's mouth conformation and way of going is unique and we acknowledge and cater for the variety of equine needs. Neue Schule have designed and produced a large variety of bits to meet these complex requirements. This Neue Schule product guide will give an overview of each bit in our range as well as details on useful product information, which can help you to decide which bit to choose.

Our YouTube channel offers a wide spectrum of videos that describe our bits, their actions and how their influence is different from other bits in our product range. Alternatively, horse owners are encouraged to call the Neue Schule team for additional information about our bits, particularly if unsure about which bit to purchase. The online Bit Selector helps to guide you to the ideal bit for your discipline, level of riding and horse's way of going.

For more detailed advice we offer an in-depth online questionnaire that can be found on our website, you will receive a personalised response either by phone or email. We will then discuss with you which bits or range of bits will be beneficial to you and provide an explanation for our reasoning.

Neue Schule has a fantastic range of expert stockists across the UK.

From knowledgeable Bit Hire specialists, NS Academy trained Bit and Bridle Fitters, to our approved and respected retailers. Internationally, our retailers are supported in their territory by dedicated Neue Schule distributors. All of our stockists and their location can be found on our website using the store locator. Hiring a bit before purchasing is an approach that we initiated in the UK nearly 20 years ago and we would advise contacting our stockists for this service.

THE IMPORTANCE OF BIT SELECTION

What is an NS Academy Qualified Bit & Bridle Fitter?

A qualified Bit & Bridle Fitter is an individual who has undergone professional training and achieved a LANTRA certification in Bit & Bridle Fitting. NS Academy is the first company to design and deliver a LANTRA accredited course aimed at producing qualified bit fitters, ensuring that this vital service is delivered to equestrians at the very highest professional standard. At Neue Schule we are committed to delivering education on the importance of having a correctly fitted bit. For those that are interested in becoming a LANTRA certified Bit & Bridle Fitter, more information can be found on the NS Academy Website.

Why use an NS Academy Qualified Bit & Bridle Fitter?

Using a qualified Bit & Bridle Fitter assures owners that their horse is in the hands of a professional who is dedicated to maintaining and improving their standards within the field of bit fitting. Bit Fitters are professionally trained to assess the mouth conformation, the way of going, the expectations of the rider and the horse's current level of training. Each qualified Bit & Bridle Fitter is up to date with the latest scientific knowledge and principles of bit and bridle fitting and will demonstrate that they advise according to scientific reasoning as well as practical knowledge. A visit from a LANTRA certified Bit & Bridle Fitter will ensure that your horse is kept happy, healthy and performing at their very best.

BIT & BRIDLE FITTING

This guide is designed to provide an overview of the **Neue Schule Sports Horse Collection and Performance Pony Range.**

You will find a comprehensive and informative view of the Neue Schule range of Bits and Spurs. The guide also provides insight into the science and research behind our products and how these benefit both horse and rider.

The guide is split into various sections allowing riders to jump straight to the most relevant section for their chosen discipline, these are -

Snaffles for Dressage

Weymouths for Dressage

Bits for Faster Work

Pelhams

Performance Pony

Saddlecloths

Apparel

Spurs

POLL PRESSURE GUIDE

Explore the poll pressure delivered by the various cheek types

HOW TO USE THIS GUIDE

Don't Turn Turtle!

Some products are intended to operate correctly only when a contact is taken (working angle). Turtle Top™ with Flex™, Turtle Tactio™ with Flex™ and Turtle Tilt™ products should have the central turtle logo upright facing forwards to ensure correct fitting and the comfortable and effective alignment with the target control surfaces in the mouth. Remember – “Don't Turn Turtle!”.

Follow the Arrow

Some Neue Schule products have an arrow logo on the side arm end. For these products it is essential that the mouthpiece is positioned within the horse's mouth with the arrow logo end on the left hand side (near side) and with the arrow pointing forwards.

Unique Angles

Products with arrows indicate that some features of the mouthpiece design are intended to operate correctly only when a contact is taken. The Tranz and Verbindend products display arrows ensuring correct fitting and the comfortable and effective alignment with the target control surfaces in the mouth.

Scan the QR Code

Scan the code shown against each product to obtain direct to your phone detailed product information, fitting instructions and product specific videos. Go on try it now, you know you want to....

Poll Pressure

Icon shows the level of Poll Pressure delivered by each product and cheek type. Multiple values are presented where the poll pressure varies dependant on rein option employed. See the **Neue Schule Poll Pressure Guide** available as a PDF download from the Neue Schule website for more detail.

Each bit also carries its own swing tag containing extensive information and advice and how to position the bit within the horse's mouth where appropriate.

Mouthpiece Sizes

Neue Schule mouthpieces are available in a range of lengths from 4" (101 mm) to over 7" (178 mm) and in various thicknesses.

We have many clever designs that employ specific pressure points in order to achieve the desired way of going, however there is no substitute for basic training. In order to progress your horse needs to understand your aids and you must know how to apply them.

Whilst giving advice many riders do question “Is it me or the horse?” In relation to many training issues, check out our Synchronicity System™ and this will leave you in no doubt! Visit www.avansce.com for more info.

Q) How do I know which size my horse needs?

A) Firstly, it is important to ensure that your current bit fits correctly. The wrong size of bit can hamper the action and in turn make the bit useless for your situation even though it may be the right one for your horse. Our website has a knowledge base section where you can see pictures of how a correctly fitted bit should look.

Q) I'd like to change from a Loose Ring to a Fixed Cheek, is there any difference in sizing?

A) Yes, when moving from a Loose Ring to a Fixed Cheek we advise that you size down a quarter of an inch as you no longer need to compensate for the hole and ring.

Q) What are the signs of an ill-fitting bit?

A) Any signs of damage to the mouth will be a good indication, particularly rubs. These can be painful for your horse and also be another distraction from your rein aids. It is as important to regularly check your horse's mouth for any changes as much as you would the rest of your horse's body.

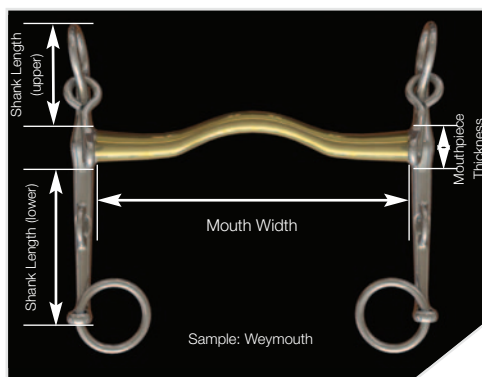

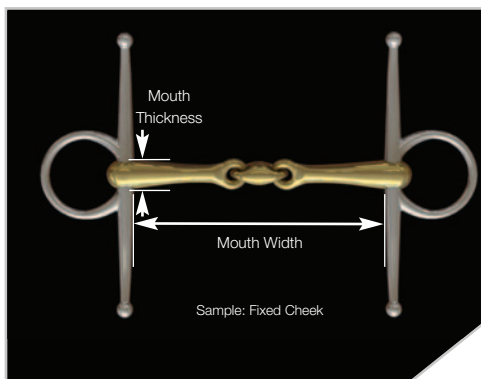

Q) Which Turtle family size do I choose?

A) Our Turtle family has a slightly different sizing guide, but don't worry! We've made it nice and simple for you- in fact...we've even given you a super colourful easy guide to measure. Simply lay your existing bit on the chart (page 39) and the size of the Turtle Top™ with Flex™ or Turtle Tactio™ with Flex™ bit you need is indicated. The colour band that best envelopes the mouthpiece of your bit from inside cheek to inside cheek indicates your ideal size.

Turtle Tilt™ Weymouth products are measured in the traditional manner (see page 8).

Q) How do I measure my bit? (for Turtle Top™ or Turtle Tactio™ see previous question)

A) We like to keep it simple when it comes to measuring your bit. Lay it down on a flat surface and pull it taught to ensure the mouth piece is fully extended.

Q) I'd like to try a Weymouth or a Pelham, but my horse is susceptible to rubs, is there anything I can do to help this?

A) You can remove the traditional curb hooks and replace them with quick links which are less likely to rub.

Q) I don't really understand how the bit I want to try works?

A) We have many resources that can provide information on all of our designs. Try our YouTube channel, website, social media pages, email enquiry@nsbits.com or the advice line. You could also consider enrolling for one of our hugely popular online courses with NS Academy, email study@nsbits.com

Q) Where can I get biting advice for my horse?

- A) On the Neue Schule website of course! We have a biting questionnaire which gives us a great insight into what you're trying to achieve, which bits you've used before and if there are specific problems your horse is having. From there we can offer you the most logical choice to try. You can also find lots of information on our YouTube channel or you can call the advice line. Best of all it's free!

Q) Why choose a Neue Schule bit?

- A) We are all riders and love our horses just as much as you do, which is why a lot of research goes into our bits and exactly how they affect horses. We've developed our own special metal called Salox® Gold that warms up quickly to the temperature of your horse's mouth, is softer than tooth enamel so it is much kinder to their teeth than stainless steel and many other metals. It has no taste, which reduces chomping and chewing allowing the horse to concentrate on your rein aids.

Q) How should I size for my doubles?

- A) Remember if you are in a fixed cheek Weymouth and a Loose Ring Bridoon, the bridoon is usually 1/4" larger.

Q) I wish to bit my 3 year old for the first time which bit would be appropriate and how do I go about it?

- A) Firstly, we do not advise using a key bit with players. This causes the horse to fixate on the mouthpiece and develops a busy and overactive mouth, when we in fact wish to achieve a quiet relaxed mouth with a horse who is attentive to the rein aids. Some of our most common suggestions are the Starter, Turtle Top™ and the Turtle Tactio™, if you need fixed cheeks we'd recommend the Turtle Top™ or Tactio™ Eggbutt or the Turtle Top™ Hunter D.

When first fitting your bit, you may wish to use a sliphead or remove the nose band, browband, reins and even undo one cheekpiece for the first few times so as you can slip it on over the neck behind the ears and then rebuckle. Use a head collar and lead your horse around the stable and then around the yard. Do not leave him on his own to fixate on the mouthpiece. (Do not lead directly from the bit).

Q) I'm worried about how my horse might react to a new bit, what should I do?

A) When introducing a new bit we recommend doing so in a safe and familiar environment. If the bit has multiple rein settings we suggest starting with the mildest setting and working up to a canter transition, before moving to settings that offer more control if necessary.

Q) Why should I use a Fixed Cheek over a Loose Ring bit?

A) The Fixed Cheeks on bits such as the Eggbutt or Full Cheek snaffles offer a more stable feel for the horse and usually promote a more consistent contact encouraging the horse to take the rein forwards and down as well as offering directional control. Whereas, a Loose Ring is usually of benefit for horses that lean or fix and block through the rein.

Q) I don't want a bit that is too harsh?

A) We don't believe in making harsh bits, instead we want the horse to be comfortable and the rider to be safe. Many of our bits have mild mouthpieces that when used in conjunction with different cheeks, can provide you with more control. The idea is to reward the horses by giving the rein when the horse responds so that you can achieve the best of both worlds. Happy horse, happy rider!

Q) I don't want to spend a lot of money trying different bits, can I trial them?

A) Yes, visit our website for this information as many of our stockists offer a hire service.

Q) Why can't I find a bit that my horse is comfortable in full time?

A) A horse with a sensitive mouth will need you to change their mouthpiece design regularly in order to work on different pressure points, sometimes even every few weeks. This is what we call the 'comfortable working window' and the practice is not uncommon.

The Merits of Neue Schule Salox® Gold

Metals are the first choice for modern horse bits but what properties would the perfect metal possess? The Neue Schule answer to this question is based on a simple philosophy – that which is good for the horse is all that matters – the rest will follow.

**P.R. van Weeren*

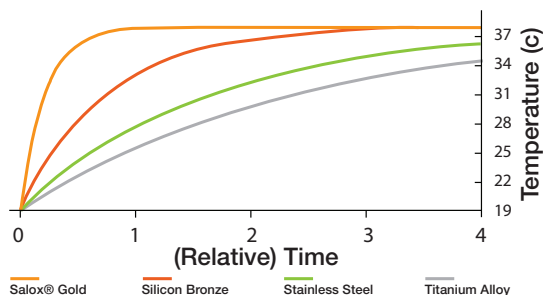

The mouth is warm and soft and needs to remain as calm and still as possible to listen for the rider's aids. So the metal should also be warm and soft and of neutral taste. This last feature is the big surprise. Why should we encourage the horse to explore the bit for taste when what we want is a calm and quiet mouth? Once again Neue Schule re-thinking leads the way.

Salox® is formulated for high thermal diffusivity because we want the bit to reach mouth temperature so rapidly that it cannot feel cold for too long. The graph shows the equilibrium uniform temperature versus time of horse bit materials of identical volume and surface dimensions when first placed in contact with a horse's mouth at 37 °C. Salox® reaches mouth temperature first.

** Studies on Salox and SCA conducted at the UK National Physical Laboratory, London*

Horses may occasionally bite onto the bit and when this happens we need to ensure that the impact force is safely and comfortably absorbed into the material of the bit rather than reflected back onto the teeth. Try biting into a stainless steel table spoon to see what we mean! Salox® is just soft enough to dampen out acoustic waves that would otherwise ring into the horse's jaw.

**Hardness data collected by Element Materials Technology Ltd.*

Finally... taste. We don't aim to feed our horse using its bit. Neither do we want the horse to explore the bit's taste. In fact it is here that we applaud stainless steel for trapping in the soluble metal ions that create taste.

Borrowing on the same principles, our addition of aluminium which forms a protective insoluble alumina (oxide) coating solves all these issues automatically. It is also self-healing - if the horse bites into the bit the insoluble surface oxide quickly re-forms to re-trap the ions.

** Comparison extraction tests for soluble ions performed at Durham University, UK using ICP analysis.*

Straight from the Horse's Mouth

What all this adds up to is that we have combined as much warmth, softness and biological inertness as we can into Salox® because the horse has given us the privilege of using his warm, soft and sensitive mouth to communicate with us.

The all too familiar tension that a cold and hard mouthpiece could create is not only counteracted but a pacifying and quietening of the mouth is obtained when using unobtrusive Salox®.

Want more?

We don't want loose talk when it comes to the science. See our web site for more complete explanations and better still talk to us through Facebook, Twitter or Instagram - don't be shy, we love to show you how it all works!

A key question, posed by company founder and biting guru, Heather Hyde, regarding poll pressure was recently resolved. Heather wanted to know how much poll pressure each bit in the Neue Schule range produces, according to cheek type.

The results are, in some instances, straight forward and in others help to resolve long-standing debates. For example, the action of the Baucher / Hanging Cheek snaffle bit on the poll has been unresolved with a clear division between two schools of thought, the first, that it causes pressure on the poll, and the second, that it alleviates pressure on the poll.

The results of this particular study determined that over a rein tension range of 0-3 kilograms the Baucher exhibited a poll-relief effect and at rein tension beyond this range little more than pre-tension was produced. The Baucher therefore appears to be a cheek, amongst some others, that produces a poll-relief effect - quite the opposite of producing extra poll pressure! (see *Figure 1 below*).

For all other cheeks the results fell into five categories of intensity. Not all cheeks have a straight-forward effect and therefore the data presented specifies poll pressure produced over the most common rein tension values of 2-4 kilograms seen during normal (flat work) riding.

Measurements were recorded independent of rider or horse ability and therefore the results simply indicate the force placed on the poll in response to forces applied through the reins based on cheek-type. Tests were repeated three times and in some instances in multiple horses to ensure that results consistently fell within a reasonable range of values. As one might expect, horses have varying degrees of elasticity in the mouth as well as other factors that are difficult to account for.

The preliminary data presented in this document will be updated as the study progresses in depth and scope – some cheeks are undergoing further testing.

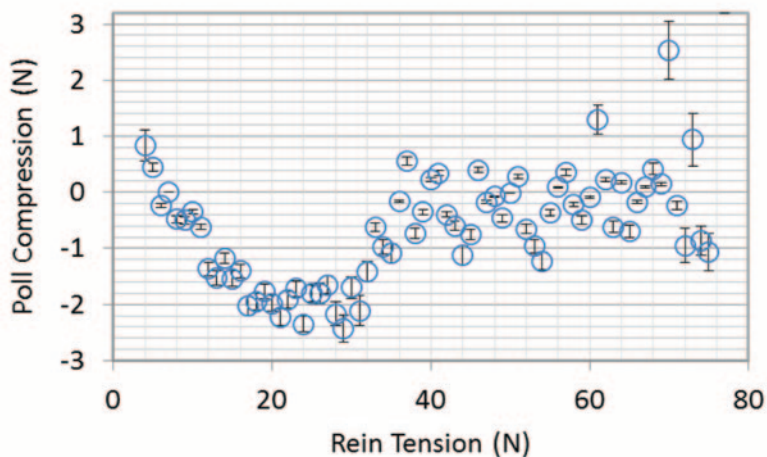

Figure 1: Baucher Action

Poll pressure numbers were calculated as percentage of the total forces applied through the reins. A poll pressure index of 1 means that approximately 10% of the total rein forces applied are transferred to the poll.

For example, when 4 kilograms of rein tension is used, 400 grams of force will be applied to the poll of the horse during that tension.

Note that some amount of poll pressure exists due to the bit hanging on the bridle and therefore, poll-relief means that this “pre-tension” is removed and no additional poll pressure means that all forces applied through the reins are distributed onto the tongue and lips.

Poll Pressure Index - Key	PPI	Poll Pressure Index - Key	PPI
Poll Relief		Poll Pressure - 20% of rein forces	
No Additional Poll Pressure		Poll Pressure - 30% of rein forces	
Poll Pressure - 10% of rein forces		Poll Pressure - 40% of rein forces	

IMPORTANT NOTE

Where multiple values are listed against a product the differing values are based upon results using the various rein options for the cheek. Please see the **Poll Pressure Guide** leaflet available as a PDF download from the *Neue Schule* website for more detail (scan the QR code to view)

METHODS

Measurements were recorded independent of rider or horse ability. Data was taken from the most common rein tension used (2-4 kgs) for normal riding. There may, in some cases, be a slight poll-relief effect or slight poll pressure effect at rein tensions below 2 kg. However, those are rarely used in real-world settings and don't necessarily need to be taken into consideration. Note that these values will not be exactly the same in every single horse, however they will fall within the given range.

Levered bit measurements were taken over all rein tension values. Typically, there are very few values above 2 kg. See the **Poll Pressure Guide** leaflet for these.

All bits were tested based on the cheekpiece. The Waterford was tested separately due to its rather unique and distinctive multi-joint design – no effects due to this mouthpiece were found.

Although in principle we have found that Loose Ring bits can apply a small amount of poll pressure due to a pulley action, it is insignificant and we have therefore rated it as zero – no additional poll pressure. The slight variation between ring sizes is a subject of *Neue Schule's* ongoing research endeavours.

POLL PRESSURE GUIDE

Starter Loose Ring

- Make the first start the right start!
- May be used for lunging, long reining, backing and ongoing training
- A gentle bit designed to encourage the horse to stretch forward and down
- Helps promote a true, quiet and confident contact

Product Code & Sizing Options

9014-55 (14 mm / 55 mm Rings)

9014-70 (14 mm / 70 mm Rings)

9008-70 (16 mm / 70 mm Rings)

5" / 5.25" / 5.5" / 5.75" / 6"

Turtle Top™ with Flex™ Loose Ring

- The modern mouthpiece with the revolutionary working angle, optimising comfort for your horse
- Sits further back, taking up very little room in the mouth whilst offering a broad, smooth weight-bearing surface
- Clarifies and enhances the rein aids
- Proven to eradicate many tongue evasions promoting happy relaxed acceptance

Product Code & Sizing Options

7023-55 (16 mm / 55 mm Rings)

7023-70 (16 mm / 70 mm Rings)

7023-70 (16 mm / 70 mm Rings)

XS / S / M / L / XL / XXL

Team Up Loose Ring

- An ergonomically modernised French Link
- A much more comfortable mouthpiece that promotes a better performance all round
- A very popular all round snaffle

Turtle Tactio™ with Flex™ Eggbutt

- Encourages the horse to stretch the neck seeking a true contact
- The riders rein aids for straightness, bend and flexion are enhanced
- Encourages the horse to relax and soften through the jaw

Product Code & Sizing Options

7011-E (16 mm)

XS / S / M / L / XL / XXL

SNAFFLES FOR DRESSAGE

Turtle Top™ with Flex™ Eggbutt

- The increased stability promotes confidence encouraging a steady, consistent contact
- Usually benefits the short tense neck
- Helps with straightness and enhances the aids for flexion and bend

Product Code & Sizing Options

7023-E (16 mm)

XS / S / M / L / XL / XXL

Verbindend Hunter-D

- Added directional control - great for tight turns in showjumping
- Helps set up the bend when changing the rein or with lateral work
- Great for horses that are 'on the forehand'
- Freedom through the shoulder is usually enhanced

Product Code & Sizing Options

9011-HD (16 mm)

5" / 5.25" / 5.5" / 5.75" / 6" / 6.25"

Turtle Top™ with Flex™ Hunter-D

- Promotes straightness and turning, ideal for the young horse or novice rider
- Enhances the connection from hand to mouth resulting in a soft sustainable contact
- The modern mouthpiece with the revolutionary working angle, optimising on comfort for your horse

Product Code & Sizing Options

7023-HD (16 mm)

S / M / L / XL

SNAFFLES FOR DRESSAGE

Demi-Anky Hunter-D

- Recommended for the rare occasion when a horse does not like a lozenge or the double joint leading to a 'busy' mouth
- Eradicates the uncomfortable action and consequent problems that the traditional straight-armed single jointed snaffle often causes
- Added directional control - great for tight turns in showjumping or setting up bends

Product Code & Sizing Options

8012-HD (16 mm)

5" / 5.25" / 5.5" / 5.75"

Tranz Angled Lozenge Hunter-D

- Great for directional control as helps with straightness and tight turns
- Reduces friction so recommended for horse prone to rubs on the lips
- Often sourced for horses that are wooden in other fixed cheeks

Product Code & Sizing Options

8023-HD (16 mm)

5.25" / 5.5" / 5.75" / 6" / 6.25"

Tranz Angled Lozenge D-Ring

- Offers greater shoulder control on a circle
- Helps set up the bend when changing the rein or with lateral work
- Highly recommended for novice riders who may not be sufficiently experienced in supporting their inside rein
- Promotes straightness in the novice horse

SNAFFLES FOR DRESSAGE

Turtle BarSMART™

- Specifically designed to relieve pressure over the more sensitive outer edges of the horse's tongue and bars
- Sourced for horses that are sensitive or lacking the confidence to commit and take the bridle forwards
- Developed specifically for flatwork training

Product Code & Sizing Options

7027-70 (16 mm)

4.75" / 5" / 5.25" / 5.5" / 5.75" / 6"

Verbindend American Dee-Lite

- Greatly clarifies and emphasises signals through the rein
- Enhances the development of the bend for lateral work and smaller circles
- Super lightweight Hunter Dee, incorporating the modern hinged American Dee-Lite Cheek
- Increased directional control recommended for the showjumper requiring tight turns

Product Code & Sizing Options

9010-75AD (12 mm)

Turtle Tilt Patent Applied For
(WO2017001288)

WEYMOUTHS FOR DRESSAGE

Thoroughbred Weymouth

- A very mild, slim mouthpiece offering an even weight-bearing surface
- Popular for breeds such as TBs, Arabs and Trakehners
- Beneficial for the horse with a fussy mouth
- May be used with a thicker bridoon for the sensitive mouth

Product Code & Sizing Options

8010-7FF (12 mm / 7 cm Shank)

4.75" / 5" / 5.25" / 5.5" / 5.75"

Lightweight Mors L'Hotte Weymouth

- A very mild, slim mouthpiece offering an even weight-bearing surface
- Good for the strong horse that may also be sensitive in the mouth
- Takes up very little room in the mouth so a thicker bridoon may be employed
- Sometimes called the French Curb

Product Code & Sizing Options

8010-5FV (12 mm / 5 cm Shank)

4.5" / 4.75" / 5" / 5.25"

Transform Weymouth

- A very mild, slim mouthpiece offering an even weight-bearing surface
- Sits further back in the mouth so often beneficial for the 'short smile'
- Good for the busy mouth
- Often sourced for horses that draw the tongue back and 'bunch' it up behind the curb

Product Code & Sizing Options

8010-5FB (12 mm / 5 cm Shank)

4.75" / 5" / 5.25"

8010-7FB (12 mm / 7 cm Shank)

4.75" / 5" / 5.25" / 5.5" / 5.75"

WEYMOUTHS FOR DRESSAGE

Aachen Weymouth

- Encourages stretching
- Often sourced for the short, tense neck or 'peacock outline'
- Designed to encourage collection and containment without tension
- A popular, mild mouthpiece

Product Code & Sizing Options

8027-7FF (16 mm / 7 cm Shank)

5" / 5.25" / 5.5" / 5.75" / 6" / 6.25"

Starter Weymouth

- Often recommended as your horse's introduction to the Weymouth
- Encourages relaxed acceptance when working towards collection
- Designed to encourage confidence and contact promoting a more advanced outline

Product Code & Sizing Options

8027-7FV (16 mm / 7 cm Shank)

5" / 5.25" / 5.5" / 5.75" / 6" / 6.25"

Pacifier Weymouth

- Sits further back in the mouth so often beneficial for the 'short smile'
- Useful for horses with a sensitive, busy mouth or tongue evasions
- Often sourced for horses struggling with acceptance of the doubles

Product Code & Sizing Options

8027-7FB (16 mm / 7 cm Shank)

5" / 5.25" / 5.5" / 5.75" / 6" / 6.25"

WEYMOUTHS FOR DRESSAGE

Slimma Weymouth

- Gives a good lifting action without upper palate interference
- A very popular unobtrusive and mild design that takes up little room in the mouth
- Often used in conjunction with the Tranz Angled Lozenge bridoon

Product Code & Sizing Options

8015-5FV (14 mm / 5 cm Shank)

4.5" / 4.75" / 5" / 5.25" / 5.5" / 5.75" / 6"

8015-7FV (14 mm / 7 cm Shank)

PERFORMANCE PONY

PERMANENT COOLING PERFORMANCE

Blending innovation and function incorporating COOLMAX® ALL SEASON technology. This innovative product transports moisture away from your horse's skin to the surface of the fabric, where it evaporates quickly, keeping your horse cool and dry when it's warm. The fibres shape offers lightweight warmth when it's cool.

APPAREL

SpurSMART™ Spur

- A very popular mild spur

- Elegant, dressage legal SpurSMART™ spurs made from high grade steel
- Single mold making them durable yet extremely flexible
- Ergonomic design increases feel and response. Remains sympathetic to the horse's sensitive flanks
- Clever NS eyelet has a recessed strap shelf for a flush finish against the boot ensuring maximum comfort. Encourages the strap to sit in the correct position over the boot
